

Science and Nature Study

Junior High School and High School students will connect with nature and the beautiful handiwork of God's world. Nature study and notebooks will be continued with advanced nature exploration and time will be spent outdoors at local natural areas. Students will explore the outdoor world, collecting and observing specimens, researching and note-booking, and conducting experiments. The *Handbook of Nature Study* by Anna Comstock will supply students with endless detailed information and guidance into their studies, along with field guides and various supplemental living books.

Living Science Study Guides written by Sabbath Mood will guide and enhance our science studies with deeper study into chemistry, physics, geology, weather, and/or electronics.
